Science 269:496-512(1995).
-!- FUNCTION: Component of the transport system for branched-chain amino acids (leucine, isoleucine and valine) Which is coupled to proton motive force (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane.
-!- SIMILARITY: BELONGS TO THE BRAC/BRAZ/BRNQ FAMILY OF TRANSPORTERS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The genes family, are clustered on chromosome 14q.";

Biochim. Biophys. Acta 1262:105-112(1995).

C.-!- FUNCTION: Plays an important role in the establishment of the regional subdivision of the developing brain and in the development of the telencephalon. Sequence-specific DNA-binding protein with a distinct binding specificity (By similarity).

C.-!- SUBCELLUAR LOCATION: Nuclear.

C.-!- SUBCELLUAR LOCATION: Nuclear.

C.-!- SIMILARITY: Contains 1 fork-head domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 3
ASJ860
Gopanine beta-moncoxygenase [EC 1.14.17.1] precursor, membrane-bound - h
Alerante names: dopanine beta-hydroxylase
C,Species: Dos prindgenius teaurus (cattle)
C,Dete: 0.9-Max-1990 #sequence revision of 0.7m.1995 #text change 05-Nov-1
C,Accession: AJ350, A34959. J30191; A3279; A41764 A34956; A31802; A37
E,Taljanidaz, J.; Streart, L.; Smith, A.J.; Klimman, J.P.
Biochemistry 28, 10054-10061, 1999

Biochemistry 33, 11563-11575; 1994

A) Title: Complete assignment of disulfide bonds in bovine dopamine beta-hydroxylase.

A, Totle: Complete assignment of disulfide bonds in bovine dopamine beta-monoxygenase catalyzes the biosynthetic conversion of dopamir C; Comment: Dopamine beta-monoxygenase is a tetrameric glycoprotein bound in both the n C; Comment: Dopamine beta-monoxygenase is a tetrameric glycoprotein; monoxygenase is a tetrameric dopomine beta-monoxygenase is predicted <81G>
C; Superfamily: peptidyglycine monoxygenase; membrane-bound form #status predicted <MI F; 1-610/Product: dopamine beta-monoxygenase; membrane-bound form #status predicted <AN F; 1-610/Product: dopamine beta-monoxygenase; membrane-bound form #status predicted <AN F; 1-32/Domain: signal sequence #link MIS #status predicted <AN F; 1-32/Domain: signal sequence #link MiS #status predicted <AN F; 117, 559-604/Binding site: carbohydrate (Asn) {covalent}; fstatus experimental F; 223, 225-226/Binding site: copper (His) #status predicted <AN F; 233, 2405, 405, 407, 407, Pinding site: copper (His) #status predicted <AN F; 234, 2405, 407, 407, Pinding site: copper (His) #status predicted <AN F; 234, 239, 251, 252, 256/Binding site: copper (His) #status predicted <AN F; 231, 232, 251, 252, 256/Binding site: copper (His) #status predicted <AN F; 231, 232, 252, 256/Binding site: copper (His) #status predicted <AN F; 231, 232, 252, 256/Binding site: copper (His) #status predicted <AN F; 231, 232, 252, 256/Binding site: corper (His) #st
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            experimental

differentiation activities, tissue growth or regeneration, activin or inhibin activity, chemotactic or chemokinetic activity, haemostatic or thrombolytic activity, receptor/ligand activity, tumour inhibition, or anti-inflammatory activity. The proteins can also be used as biomarkers, to identify tissues or cell types which express the proteins, or a stage-or disease-specific alteration in protein expression. They can be used in protein interaction assays, to identify ligands or binding proteins. Compounds which affect the biological activities of the secreted proteins or their ability to interact with specific ligands can be identified using the proteins in screening assays. The proteins and antibodies that using the proteins in screening assays. The proteins and antibodies that bind specifically to the protein can also be used to design diagnostic tests and therapeutic compositions for diseases which may be associated with altered expression of these proteins. Fusion proteins can be used to target other protein domains to cellular membrane or they can be secreted extracellularly

The present invention provides the protein and coding sequences of four human protease associated proteins, designated HPRAP-1, HPRAP-2, HPRAP-3 and HPRAP-4. Human protease associated proteins are expressed in cancer and HPRAP-4. Human protease associated with inflammation and the immune disorders. The sequences can be used to diagnose, treat or prevent cell proliferative and immune disorders. The sequences can be used to diagnose, treat or prevent cell proliferative and immune disorders, including actinic prevent cell proliferative, alterosclerosis, atherosclerosis, begatis, portasis, primary coturnal haemoglobinuria, polycythaemia vera, portasis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, portasis, paroxysmal nocturnal haemoglobinuris, and alterosclerosis, antyloaning spondylitis, amyloidosis, anaemia, asthma, atherosclerosis, autolimmune haemolytic anaemia, autoimmune the proportic dermatitis, cholecystitis, contact dermatitis, autoimmune the approximation of action of dermaticis, dermatomyositis, diabetes mellitus, erythema nodosum, atrophic gastritis, diabetes mellitus, fetalis, erythema nodosum, atrophic gastritis, diabetes mellitus, hyporeachis, erythema nodosum, atrophic gastritis, diabetes mellitus, osteoporoseis, pancreatis, discesse, Hashimoto's thyroiditis, hyporeachis and traumatoid arthritis, scleroderma, Sjognen's syndrome, systemic lupus erythematosis, systemic spring and trauma. He present sequence is the HPRAP-2 protein. Note: The present sequence is the HPRAP-2 protein. Note: The present sequence is the berwent family equivalent this Derwent basic but was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ô

the present invention provides the protein and coding sequences of four human protease associated proteins, designated HPRAP-1, HPRAP-2, HPRAP-3 and HPRAP-4. Human protease associated proteins are expressed in cancer and immortalised cell lines and tissues associated with inflammation and the immune response, and so appear to play a role in cell proliferative and immune disorders, including actinic the immune disorders. The sequences can be used to diagnose, treat or prevent cell proliferative and immune disorders, including actinic keratosis, arteriosclerosis, atherosclerosis, burstis, cirrhosis, provent cell proliferative and immune disorders, including actinic keratosis, arteriosclerosis, atherosclerosis, and immune disorders, portassis, primary chrombocythaemia, AIDS, Addison's disease, adult respiratory distress syndrome, allergies, ankylosing spondylitis, amyloidosis, anaemia, asthma, atherosclerosis, autoimmune hemolytic anaemia, autoimmune thyroiditis, bronchitis, cholecysticis, contact dermatitis, cronn's grathma, atherosclerosis, autopic dermatitis, dermatomyositis, diabetes mellitus, chychicis, pronchitis, dermatomyositis, diabetes mellitus, erythema nodosum, atrophic gastritis, diabetes mellitus, coodpasture's syndrome, yndrome, multiple sclerosis, myocacdial or pericarderma, slogare's syndrome, myasthaemia gravis, myocacdial or pericarderma, slogare's syndrome, myasthaemia gravis, myocacdial or pericarderma, slogare's syndrome, myasthaemia pravis, systemic lupus erythematosis, systemic sclerosis, thrombocytopenic purpura, ulcerative colitis, uveitis, werner syndrome, systemic anaphylaxis, systemic lupus erythematosis, systemic slogarished from this infections and trauma. The present sequence is the HPRAP-2 protein, which was used in a homology comparison in the exemplification of the present sequence is the HPRAP-2 protein, wiscustory in the present sequence was not obtainable from this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0

The present sequence is an inhibitor of the protease activity of hepatocyte growth factor (HGF) activator (HGFA), which has a molecular weight of about 40 kD when determined by SDS-PAGE. The inhibitor, which was isolated from the human cancer cell line MKN45, can be used as an ir vivo or in vitro regulatory factor for HGF or HGFA. It can also be used to raise antibodies, useful in kinetic studies of the inhibitor, or as assay standards
                                                                                                                                             Inhibition; inhibitor; protease; hepatocyte; growth factor; activation; activation; activation; regulation; regulator; antibody; kinetic study; assay standard.

The agent contains a protein, HAI-1 which has the following properties, M.W. of ca. 40,000 to 57,000 balton by SDS-PAGE and an activity of inhibiting protease activity of hepatocyte growth factor (HGF) activator. The HGF inhibiting activity of the protein is specific. HAI-1 shows a high inhibiting activity on plasmin, trypsin, HGF activator and plasma kallikrein but substantially no inhibiting activity on thrombin. This sequence represents the human HAI-1 protein
                                                                                                                                                                                                                                                                   plasmin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

```
The present invention relates to the isolation of human protein

modification and maintenance molecules (PMMM), and the polynucleotide

sequences encoding them. A total of PMMM polypeptides (designated PMMM to are disclosed. The sequences of the invention are useful

c -1 to PMMM-40) are disclosed. The sequences of the invention are useful

c for diagnosing a condition or disease associated with the expression of generating an expression profile of a sample containing the generating an expression profile of a sample containing the polynucleotides. The disease or conditions associated with decreased polynucleotides. The disease or conditions associated with decreased expression or overexpression of PMMM are cell proliferation disorders

(e.g. cancer, atherosclerosis), neurological disorders (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory disorders, (e.g. AIDS, allergies), developmental disorders (e.g. hypothyroidism, Cushing's syndrome), gastrointestinal or epithelial disorders, and infections. The syndrome) gastrointestinal or epithelial disorders, and infections or in for effectiveness as agonists or antagonists of the polypeptides, or in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human protein modification and maintenance molecules (PMMM), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant PMMM expression e.g. cancer, atherosclerosis, or infections.
                                                                                                                                                                                                                                                                     Human; protein modification and maintenance molecule; PMMM; cancer; cell proliferation disorder; atherosclerosis; neurological disorder; epilepsy; Huntington's disease; stroke; immune disorder; allergy; inflammatory disorder; AIDS; developmental disorder; hypothyroidism; Cushing's syndrome; gastrointestinal disorder; epithelial disorder; infection; cytostatic; antiarteriosclerotic; anticonvulsant; nootropic; neuroprotective; cerebroprotective; anti-HIV; antiallergic; vulnerary; antiinflammatory; thyromimetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Yue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BM, Yang J, Lee S'

The present sequence is that of novel human immunomodulator PR0256 (UNQ223), as deduced from cDNA (see AAF30055) isolated from a placental tissue library. PR0256 (58 kDa, p1 6.22) shows sequence homology to human bissue library. PR0256 (58 kDa, p1 6.22) shows sequence homology to human protein, suggesting protease-inhibitor activity. The invention protein, suggesting protease-inhibitor activity. The invention of proteins (see AAF30050-62) encoding novel human PR0 proteins (see AAF30050-62) encoding novel human PR0 infiltration of inflammatory cells into a tissue of a mammal, stimulating or thancing an immune response to an antigen. Claimed compositions comprising a PR0 DOTYPEPIGE or increasing the proliferation of IT-1 lymphocytes in a mammal in response to an antigen. Claimed compositions comprising a PR0 DOTYPEPIGE or its antagonist have the opposite effect. A claimed method for treating an immune related disorder, such as a T cell disorder, involves administering a PR0 polypeptide, an agonist antibody or an antagonist antibody. The disorder is selected from a systemic lupus erythematosus, rheumatorial arthritis, osteoarthritis, cidopathic inflammatory myopathy, Sjogen's systemic sclerosis, diapetes mellitus, immune active hepatitis, autoimmune haemolytic anaemia, autoimmune thrombotytopania, thyroiditis, diabetes mellitus, immune active hepatitis, primary biliary cirrhosis, granulomatous colitis and crohm's diseases (such as multiple sclerosis), autoimmune chronic active hepatitis, primary biliary cirrhosis, granulomatous finesase, (auto)immune-mediated skin diseases (such as bullous skin disease, (auto)immune-mediated skin diseases (such as bullous skin diseases (auto)immune-mediated skin diseases (such as bullous skin diseases (auto)immune-mediated skin diseases (such as bullous skin associated diseases), allergic diseases (such as agastive errementation associated diseases (such as graft related skin diseases) (all claimed agastic rejection and passociated diseases) (all claimed errors) and errors antibod

The present invention relates to PRO256 or its agonist/antagonist may be used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, especially a human with cardiac hypertrophy, trauma, a type of tumour or age-related macular degeneration. PRO256 may be administered together with a cardiovascular, endothelial, or angiogenic agent, a chemotherapeutic agent, a growth inhibitory agent, or a cytotoxic agent. PRO256 may also be used to treat the disorders above, preferably through administration via ex vivo gene therapy. PRO256 or its agonist may be used to inhibit endothelial cell growth, angiogenesis or protease activity of a hepatocyte growth factor. Stimulation or protease activity of a hepatocyte growth factor. Stimulation or inhibition of the protease activity of a hepatocyte growth factor. Stimulation or inhibition of the protease activity of a hepatocyte growth factor is preferably carried out where a mammal has a cardiovascular, endothelial, or angiogenic disorder selected from peripheral vascular disease, hepatic or renal injury or a restinosis disorder. The present sequence is human hepatocyte growth factor activator inhibitor, PRO256
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MERRHPYCSGTCQPTQFRCSNGCCIDSFLECDDTPNCPDASDEAACEKYTSGFDELQRIH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to the isolation of novel human PRO polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy. AAU86128-AAU86162 represent the human PRO polypeptides of the invention

ABEB8072 to ABEB8258 encode the PRO proteins given in ABB84817 to
ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic,
antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic
activities, and can be used in gene therapy. The PRO polynucleotides,
proteins, agonists and antagonists are useful for treating or diagnosing
a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g.
cardiac hypertrophy, trauma, cancer, age-related macular degeneration,
atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis,
angiogenesis (such as breast carcinoma and liver carcinoma) and wound
healing. The PRO polynucleotides have applications in molecular biology,
including use as hybridisation probes, and in chromosome and gene
mapping. ABL88259 to ABL88267 represent primers and probes used in the
cemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                          383

This invention relates to the cDNA and protein sequences of novel
secreted and transmembrane polypeptides PRO polypeptides. The invention
also comprises a method for producing the proteins of the invention by
recombinant means and antibodies specific for the protein of the
invention. The antibody may be used for detecting the PRO proteins of the
invention and may be used to modify their activity. Polynucleotides may
be used as hybridisation probes for a CDNA library to isolate the full-
length PRO cDNA or to isolate other cDNAs, to construct hybridisation
probes for mapping the gene which encodes that PRO and for genetic
analysis of individuals with genetic disorders, in assays to identify
other proteins or molecules involved in binding reaction, to generate
transgenic animals or knock-out animals which in turn are useful in the
development and screening of therapeutically useful reagents, for
chromosome identification, and tissue typing. The PRO polypeptides are
useful in gene therapy, and as molecular weight markers for protein
electrophoresis purposes. The sequence may also be used to detect
overexpression on PRO polypeptides in cancerous tumours and for screening
for differentially expressed genes using microarray technology. The
present sequence represents a human PRO protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FPSDKGHCVDLPDTGLCKBSIPRWYNPFSEHCARFTYGGCYGNKNNPEBEQQCLESCRG

                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a PRO protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

Claim 11; Fig 10; 307pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the proliferation of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and lnn gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or medicament for tracting a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for inducing endothelial cells tube formation and for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. This sequence represents a human PRO polypeptide of the invention.

The invention relates to an isolated secreted/transmembrane (PRO) polypeptide, having at least 80% sequence identity to a sequence selected from any one of the 57 amino acid sequences given in specification, or to a sequence encoded by a nucleic acid motecule selected from any one of the mucleic acids deposited under any of the ATCC accession numbers given in specification, or a sequence having at least 80% identity to PRO in specification, or a sequence having at least 80% identity to PRO in specification, or a sequence having at least 80% identity to PRO in without its associated signal peptide. An extracellular domain of PRO with or without its associated signal peptide, an extracellular domain of PRO, PRO, PRO (Esion proteins, inducing endothelial cell tube formation (by administering PRO281, PRO21807, PRO2893) or PRO3189, PRO4499, PRO6308, PRO6000, PRO10775, PRO21807, PRO21807, PRO21807, PRO50893 or PRO3189, PRO4499, PRO6308, PRO6000, PRO10775, PRO50801, PR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MERRHPVCSGTCQPTQFRCSNGCCIDSFLECDDTPNCPDASDBAACEKYTSGFDBLQRIH

oligonucleotide probes are useful for isolating genomic and cDNA nucleotide sequences, for measuring or detecting the expression of an associated gene, and as antisense probes. PRO nucleic acid is useful as hybridisation probe, in chromosome and gene mapping, in the generation of antisense RNA and DNA, and for the preparation PRO polypeptides. PRO and PRO nucleic acid are useful as therapeutic agents, e.g. vaccines. The present sequence represents a PRO protein.

/note="1st strand cDNA was primed with a NotI-oligo(dT)
primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized.
